

### Research and development

- Transfer from research to industry
- Interprofessional Studies- Validation tests
- Development of facilities
- Definition of test protocols

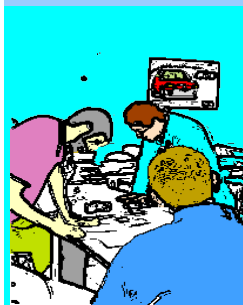

### New equipments

- Overall management of project
- Techno-Economic Studies
- Analysis of the local regulatory
- Safety Integrated- Benchmarking
- Search for suppliers
- Development of technical specifications
- Technical relations with the financials or insurers
- Decision Support
- Training of users to new equipment

### Environment Health & Safety

- Risk assessment (in partnership)
- Evaluation of chemical risk (in partnership)
- Integrated safety
- REACH and monitoring of SDS
- Preparation of documents prevention according to local rules
- Best Available Techniques according to european BREF
- Support for the interpretation of all studies related to the environment and risks: impact study, study of zero waste water...
- Technical support for relations with authorities of states

### Training

- Training in risk assessment (in partnership)
- Training in chemical safety for downstream users
- Training members of safety comete (if adaptable in local rules)
- Training in surface treatments choice
- Training in modification of the surface: pickling, polishing, engraving
- "Pubtraining" (training for use by customer or perspectives of unknowd- or badknowed technologies )

#### Example of possible mission:

- ❖ New properties for surfaces issues of relevant work, contact centers for fundamental research, technical feasibility, analysis of the industrial needs, technical transfer, economic conditions (IP ...), relations with a technical center. Following of the project until industrialization

#### Example of possible mission:

- ❖ Support as expert in a multicompetences team project for reconstruction of a workshop finishing integrated response to a disaster. Such intervention is designed to compress up all the time and therefore minimize the operating loss. If emergency is required, the consultant may be available soon

#### Example of possible missions:

- ❖ Risk assessment and the associated actions plan
- ❖ **After** an accident: establishment of the tree of causes and improving the overall security of the facility or employment situation
- ❖ Identification of products and preparations covered by REACH
- ❖ Outsourced of EHS function for multisites

#### Example of possible mission:

- ❖ Formation "tailored" to chemical hazards present in the workshop. Training can be tailored to different audiences: line operators, chemists, safety manager during the same week on site
- ❖ Training specific to the company intended to publicize the products or processes to potential customer

***Strategic  
Marketing -  
customers/suppli  
ers relationships***

- Surveys of customers or suppliers
- Audit of suppliers
- Development of methodology to improve customer-supplier relationship
- Support to redaction of specifications

**Example of possible mission:**

- ❖ Creating of an appearance databank
- ❖ Survey in an European trade companies about a process
